<b>Table F8:</b> Volume of publications on selected research topics relating to SDG15: life on land, 2012–2015 and 2016–2019.	S.164

# Technical and methodological notes on the statistical annex

## METHODOLOGICAL NOTE

### Bibliometric data

Publication data have been compiled for UNESCO by Science-Metrix from the Scopus (Elsevier) database, excluding Arts, Humanities and Social Sciences.

Publications listed under the People's Republic of China do not include those for its Special Administrative Regions of Hong Kong and Macao, or the Taiwan Province of China.

### Economic data

Data on economic indicators, such as gross domestic product (GDP) and purchasing power parity (PPP), are based on the World Bank's economic data release of July 2020: <http://data.worldbank.org/products/wdi> (see the note on the cut-off date).

It should be noted that, since 2014, the UNESCO Institute for Statistics has used data on total general government expenditure (all sectors) from the International Monetary Fund's World Economic Outlook database as the denominator for its indicator, expenditure on education as a percentage of total government expenditure. For more information about the change in methodology, please visit: [www.uis.unesco.org/education](http://www.uis.unesco.org/education)

### Education data

The UNESCO Institute for Statistics (UIS) compiles education statistics, from official administrative sources at the national level, through its annual Survey of Formal Education. The objective of this survey is to provide internationally comparable data on key aspects of education systems, such as access, participation, progression and completion, as well as the associated human and financial resources dedicated to them.

In addition to this survey, these data are also collected through a joint data collection mechanism involving UIS, the Organisation for Economic Co-operation and Development (OECD) and the Eurostat. The data collected are used to monitor and report on international development goals related to education, including the education goal of *The 2030 Agenda for Sustainable Development*.

For more information on the UIS Survey of Formal Education, please visit: <http://uis.unesco.org/en/uis-questionnaires>

### GERD

R&D expenditure in US dollars at the purchasing power parity (PPP\$) rate is presented in Table B1 using constant 2005 prices.

### Innovation data

The UNESCO Institute for Statistics collected data on innovation within the manufacturing industry every two years up to 2017 through its innovation data collection. In addition, the institute obtained innovation data directly from Eurostat and the African Science, Technology and Innovation Indicators (ASTII) Initiative of the African Union/NEPAD Planning and Coordinating Agency for countries which participate in the data collections of these organizations. With a few exceptions, innovation data refer to a three-year reference period that varies from one country to another. The data collected are featured in the institute's international database at: <http://data.uis.unesco.org>

### Population data

Population data were obtained from the World Bank's World Development Indicators (accessed September 2020). For Eritrea, data were available only for 2011 and this value was used for all years, which could lead to a slight overestimation of the number of publications per million inhabitants for later years. Population data for the Cook Islands and Niue were obtained directly from the national statistical service. Niue provided data for only 2011 and 2017; the remaining years were estimated based on the growth between 2011 and 2017.

### Research and experimental development (R&D) data

The UNESCO Institute for Statistics collects data on resources devoted to research and experimental development through its R&D statistics survey. In addition, it obtains data directly from the OECD, Eurostat, the Ibero-American and Inter-American Network on Science and Technology Indicators (RICYT) and the African Science, Technology and Innovation Indicators (ASTII) Initiative of the African Union/NEPAD Planning and Coordinating Agency for countries which participate in the data collections of these organizations. The data collected can be found at: <http://data.uis.unesco.org>

Data obtained from the OECD are based on the OECD's Research and Development Statistics database released in April 2020. Data obtained from Eurostat are based on the Eurostat Science and Technology database, as of April 2020. Data received from RICYT are as of July 2020. Data obtained from ASTII are based on the African Innovation Outlook III (2019).

### Cut-off date for data in the statistical annex and chapters

R&D and economic data presented in the regional/individual country chapters may not always correspond to the data given in the statistical annex or in Chapter 1. The reason for this is that the underlying economic data used to calculate R&D indicators are based on the World Bank's economic data release of July 2020 for the annex and Chapter 1, whereas data in the other chapters might come from a different release of economic data by the World Bank.

## TECHNICAL NOTE

### Bibliographic data

**Number of papers:** this is the number of peer-reviewed scientific publications (e.g. articles, reviews and notes only) indexed in the Scopus database. Publications are assigned to countries according to the author affiliation address on the publications. Double counting is avoided at both the national and regional levels. For instance, a paper co-authored by two researchers from Italy and one author from France is counted only once for France and once for Italy but also once for Europe and once for the world.

The regions were defined using a blend of geographic and economic groupings based on status in 2019. For example, the United Kingdom was included in the European Union region due to its membership in the period under study (2011 to 2019). The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

**Number of international collaborations:** this is the number of publications involving authors from at least two different countries, counted once for each entity. For instance, if 13 authors from one organization collaborate with 1 author from another, that article counts as a co-publication, counting once for each organization. For the computation of international collaboration, territories were considered to be part of their respective mainland countries. Thus, collaboration between Guadeloupe and France would not be considered as international co-authorship. The international collaboration rate of a country is simply a measure of how many articles are co-published with international partners as a proportion of the given country's total output.

**Average of relative citations:** this is an indicator of the scientific impact of papers produced by a given entity (the world, a country, an institution) relative to the world average (i.e. the expected number of citations, set as 1). Citation scores for conference papers are not included in the citation analysis because citation patterns associated with them tend to distort impact measurements.

**Field classification of publications:** see Annex 2 for the broad fields of science used to prepare statistics at the level of scientific disciplines: agriculture, fisheries and forestry; animal and plant biology; built environment and design; chemistry; cross-cutting strategic technologies; engineering; environmental sciences; geosciences; health sciences; ICTs, mathematics and statistics; and physics and astronomy.

### Education data

The fields of study are defined as per the International Standard Classification of Education: *Fields of Education and Training* (ISCED-F 2013). Agriculture (includes agriculture, forestry, fisheries and veterinary); natural sciences (includes biological, environmental, geological and physical sciences), mathematics and statistics; engineering (includes engineering, manufacturing and construction);

Table 1: Levels of tertiary education

UNESCO Science Report term	ISCED 2011 equivalent
Short cycle	ISCED level 5 – short-cycle tertiary education
Bachelor's or equivalent	ISCED level 6 – bachelor's or equivalent level
Master's or equivalent	ISCED level 7 – master's or equivalent level
PhD or equivalent	ISCED level 8 – doctoral or equivalent level

ICTs (information and communication technologies); health (health and welfare); social sciences and journalism; business, administration and law; and arts and humanities (contains the ISCED-F 2013 broad fields of arts and humanities, education and services).

International classifications for the type of degree received follow the International Standard Classification of Education (ISCED 2011) of level of education (Table 1).

Data on internationally mobile students that are collected by the UNESCO Institute for Statistics (UIS), OECD and Eurostat encompass students who are pursuing a tertiary degree and thus exclude students on exchange programmes. Data on inbound internationally mobile students reported by host countries are used by the UIS to estimate the number of outbound internationally mobile students from a given country. As not all host countries report disaggregated data on internationally mobile students by country of origin, the number of outbound students from a given country may thus be underestimated.

### R&D data

The definitions and classifications used to collect R&D data are based on the *Frascati Manual: Proposed Standard Practice for Surveys on Research and Experimental Development* (OECD). Some of the key definitions related to R&D data are presented in the glossary of the present report.

Two types of R&D indicator are usually compiled: data on R&D personnel measure researchers, technicians & equivalent staff directly involved in R&D, as well as other support staff; data on R&D expenditure measure the total cost of carrying out the R&D activity concerned, including indirect support.

Global and regional estimates for R&D expenditure and researchers presented in Chapter 1 are calculated based on country-level data obtained from the UNESCO Institute for Statistics, accessed in August 2020.

### Patent data

**Number of granted patents:** this is the number of granted patents indexed in the PATSTAT database for five patent offices, namely the US Patent and Trademark Office (USPTO), European Patent Office (EPO), Japanese Patent Office (JPO), Korean Intellectual Property Office (KIPO) and State Intellectual Property Office of the People's Republic of China (CNIPA). Patents are assigned to countries according to the country of the inventors on the applications. Double counting is avoided at both the national and regional levels. For instance, a patent application submitted by two inventors from Italy and one inventor from France is counted

only once for France and once for Italy but also once for Europe and once for the world. Therefore, the sum across countries/regions is higher than the world total because of co-inventorship. The IP5 total is the sum across all five offices; therefore, some inventions are counted more than once because patents to protect them may have been granted in more than one market.

Data quality is high for the USPTO and EPO but information related to the country affiliation of inventors is often missing in PATSTAT for CNIPA, JPO and KIPO. To prevent underestimating output levels for countries with intensive patenting activity at these offices, methods based on patent families were implemented to reduce the number of unknown affiliations to a minimum (i.e., only a few percentage points). Caution is nonetheless advised because these methods do not make it possible to correct the data perfectly.

## TECHNICAL NOTE FOR THE BIBLIOMETRIC STUDY PERTAINING TO THE SUSTAINABLE DEVELOPMENT GOALS

---

### Bibliometric data

Publication data were compiled for UNESCO by Science-Metrix using keyword searches of the complete Scopus (Elsevier) database, including Arts, Humanities and Social Sciences, for publications released from 2011 to 2019. In selected cases, a complementary search was conducted to include all of the content of selected relevant journals. For the list of specific keywords, see the *UNESCO Science Report* web portal.

### Countries and regions

As above, publications were assigned to countries according to the author affiliations listed on the publications. The regions were defined using a blend of geographic and economic groupings based on status in 2019. For example, the United Kingdom was included in the European Union region due to its membership in the period under study (2011 to 2019).

The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

### How publications are counted

As above, publication counts of articles, reviews and conference papers are based on the full-counting method. Using this method, each country or research organization that has a researcher on the list of authors for a given paper gets a full count (1 publication) for that paper. Therefore, the sum across countries/regions is higher than the world total because of co-authorship. Different topics are not necessarily mutually exclusive and do not cover the entirety of science; therefore, the sum across topics is not expected to be equal to the total reported in Scopus.

### Specialization Index

The specialization index (SI) indicates how much output an entity produces in an area of research, adjusted for the entity's overall number of papers and relativized to the global average. Because countries or regions cannot be specialized in all areas of research by definition, fractional counting of publications is used instead of full counting. This avoids the overestimation of specialization in broad fields with high levels of international co-authorship, as the full counting method could lead to all countries being specialized in a given area simply because of these higher levels of collaboration. Fractional counting divides publications based on the proportion of authors from a country contributing to an article. For instance, if a paper lists two authors with addresses from the United Kingdom, one from Spain and one from Latvia, the publication is divided into four parts, with the United Kingdom receiving two of these parts (0.5 publication), Spain receiving one (0.25 publication) and Latvia receiving the fourth part (0.25 publication).

## METHODOLOGICAL NOTE FOR THE BIBLIOMETRIC STUDY PERTAINING TO THE SUSTAINABLE DEVELOPMENT GOALS

---

### Comprehensiveness

The initial dataset for the SDG-related publications is global, including all publications indexed in the Scopus database with publication dates from 2011 to 2019.

The data cannot be considered comprehensive for all the Sustainable Development Goals or for an entire relevant body of research. Due to the indivisibility of the SDGs, there are many overlapping areas of importance. The topics are grouped by SDG in Tables F1 to F8 but the keyword searches were conducted using the full database and the findings may be relevant across multiple SDGs.

The document types included in the Scopus analysis are articles, reviews, short surveys and conference proceedings. An empirical approach has been developed by Science-Metrix to filter documents based on the source types and document types (Table 2) and to maximize the recall of peer-reviewed papers while minimizing the inclusion of non-peer-reviewed documents.

Science-Metrix used a systematic approach to remove low-quality journals from the analysis, primarily by excluding the list of journals removed by Elsevier from the Scopus database, as well as the excluded journals list from the Directory of Open Access Journals.

## Data analysis

The **specialization index** is measured as the proportion of output of a given country in a given topic, divided by the proportion observed at the world level. For example, a country with 2% of its output in a topic that represents 1% of all research at the world level would score 2.00 for this indicator because it has twice as much output as expected for this topic.

The **growth ratio** is calculated as the number of publications in 2012–2015 divided by the number of publications over 2016–2019.

Table 2: Combinations of source types and document types used for the production of bibliometric indicators

Source type	Document type
Book series	Article, conference paper, review, short survey
Conference proceeding	Article, review, conference paper
Journal	Article, conference paper, review, short survey

Source: Prepared by Science-Metrix

# Broad fields of science

Adapted from the Science-Metrix Classification of Scientific Journals (v. 1.06)\*

In order to generate statistics on scientific publications by broad field of science, the existing Science-Metrix classification of 174 subfields was regrouped in the 11 broad fields listed on the following page.

Some 38 of Science-Metrix's subfields were discarded from the full bibliometric study conducted by Science-Metrix because they classified papers from social sciences and the humanities that included fields such as linguistics, law or business. These papers were not covered by the *UNESCO Science Report*, in order to ensure greater homogeneity within fields and, thereby, facilitate comparisons between countries.

The broad field of cross-cutting technologies has been split into 10 subcategories. The three categories of artificial intelligence and robotics, blockchain technology and the Internet of Things did not align with the existing subfields\* based on journal-level classification, so were created by manually assembling lists of journals principally covering those themes using a keyword-based approach. Journals identified as being mainly focused on one of these themes were removed from their original subfield to ensure that all broad fields were mutually exclusive.

It is important to note that all of these subfields are defined at the journal level. For example, this means that an article on robotics published in a more general journal on information and communication technologies would not be counted towards the AI and robotics dataset. The only exceptions are generalist journals, such as *Nature* or *Science*, which cannot be accurately assigned to a single subfield. Articles from such journals were instead assigned a subfield at the article level by using a machine-learning algorithm.

In graphics within chapters, percentage shares of broad fields of science have been rounded. This means that values of 0.5% and over have been rounded up to 1% and those accounting for less than 0.5% of total output have been excluded.

The composition of each broad field of science by subfield can be found on the following page.

For additional details of the bibliometric research, please see the methodological note at the end of Table E1.

# Background information on the bibliometric study of research trends on selected topics related to *The 2030 Agenda for Sustainable Development* (Tables F1-F8)

## OVERVIEW

In 2020, UNESCO commissioned a study from Science-Metrix of the volume of scientific publications advancing the sustainable development agenda at the global, regional and national levels between 2011 and 2019. The study was not designed to be exhaustive. Rather, it focused on 56 sample research topics identified by UNESCO that were of particular relevance to eight of the Sustainable Development Goals (SDGs).

The aim of the study was three-fold:

- **to assess the volume of articles published** by each country in the world between 2011 and 2019 on key topics of relevance to the SDGs;
- **to identify the degree of specialization on each topic**, by assessing the number of publications produced by a given country over the 2012–2019 period as a proportion of that country's total scientific output. This level of specialization was then compared with the global average to give the **specialization index**. For example, a country which produced 2% of its output on a specific topic accounting for 1% of all research on that same topic at the global level would score 2.00 on the specialization index for this indicator because it produced twice as many publications as would be expected on this topic (for further details of this analysis, see Annex 5); and
- **to identify the growth rate of each topic**, in order to monitor change in the priority accorded to these topics since the adoption of *Agenda 2030 for Sustainable Development* in 2015. In order to avoid annual fluctuations, the study compared scientific output between two periods: 2012–2015 and 2016–2019.

This bibliometric study was undertaken in June 2020. Science-Metrix identified publications on each topic through searches for keywords across the complete Scopus (Elsevier) database, including as concerns the Arts, Humanities and Social Sciences. The table that follows describes the scope of each topic. The specific keywords used for each topic are available on the open access *UNESCO Science Report* portal as an online supplement.

The selected topics are grouped by Sustainable Development Goal. In some cases, an individual topic may be relevant to more than one goal, such as that on traditional knowledge. Moreover, as the key words are not mutually exclusive, there may be occasions when the same article has been counted under more than one topic; for instance, an

article on the impact of radiation on human health (SDG3) may also be referenced under the topic on radioactive waste management (SDG9).

The complete datasets for this bibliometric study are available from the *UNESCO Science Report* portal. A summary of the key findings for individual countries and regions may be found in chapters 4–26 and a global summary in chapter 2 of the present report.

## SCOPE OF THE STUDY

### Topics relating to SDG2: Zero hunger

The data are presented in Table F1 of the statistical annex, available online, along with the full dataset

#### Pest-resistant crops

This dataset includes articles on technology to activate or enhance plant resistance to pathogens. Articles on the genetic engineering of plants to resist pests, essentially *Bacillus thuringiensis* (*Bt*) crops, constitute a large share of the dataset.

#### Help for smallholder food producers

This dataset covers efforts to increase the agricultural productivity and income of smallholder food producers, including through value addition. The dataset includes articles on the productivity, sustainability, profitability and security of small-scale agriculture and farming, such as community agriculture/farming, family agriculture/farming, subsistence agriculture/farming and smallholders.

#### Precision agriculture

This dataset includes articles on precision agriculture, precision farming and other synonymous expressions. It also includes articles on data-monitoring technologies whenever articles also mention terms such as crops. Specific precision agriculture aspects such as precision irrigation, seed metering, variable-rate application, soil sensing, yield mapping, precision planting, site-specific management and the like have also been targeted.

#### Agro-ecology

This dataset focuses on agri-environmental practices and the impact of those practices, including environmentally promising agricultural practices such as reduced tillage, agroforestry, cover crops, crop rotation, low-input agriculture,

conservation agriculture, silvopastures, alley cropping, integrated crop-livestock and more. Publications measuring and comparing the environmental impact of conventional agriculture are included. The topic includes alternatives to chemical pesticides.

#### **Maintain genetic diversity of food crops**

This dataset includes articles on maintaining the genetic diversity of seeds, cultivated plants and farmed and domesticated animals and their related wild species. Articles discussing the genetic diversity and use of wild or heirloom varieties are also included. All studies related to landraces, plant genetic resources, crop varieties, wild relative and germplasm conservation have been included, provided that they refer to agricultural plants or animals.

#### **Traditional knowledge**

This dataset includes articles relating to the recording of knowledge from traditional, indigenous or local populations or derived technologies. This topic is grouped under SDG2 but extends to other SDGs. Ethno-disciplines such as ethno-agriculture, ethnomedicine, ethnobotany and ethnomycology are part of the dataset. About 700 indigenous population names from every continent were used to help build this dataset, combined with terms related to traditional knowledge. The keyword 'local knowledge' was used only in combination with 'indigenous'. Ancestral knowledge from very large populations is voluntarily excluded; for instance, traditional Chinese medicine is excluded.

### **Topics relating to SDG3: Good health and well-being**

The data are presented in Table F2 of the Statistical Annex, available online, along with the full dataset.

#### **Reproductive health and neonatology**

This dataset includes articles on reproductive health, neonatology and maternal health. It covers women's sexual health, in general. It does not extensively cover research on sexually transmitted diseases and excludes the human immunodeficiency virus, which is analysed as a separate topic.

#### **Human immunodeficiency virus (HIV)**

This dataset includes all articles on research into HIV and acquired immune deficiency syndrome (AIDS). For example, this includes articles on the epidemiology, treatment and prevention of the disease and/or its social impact.

#### **Tropical communicable diseases**

This dataset covers those diseases that figure in the list of neglected tropical diseases established by the World Health Organization, namely: Buruli ulcer; Chagas disease; dengue and chikungunya; dracunculiasis (Guinea-worm disease); echinococcosis; food-borne trematodiases; human African trypanosomiasis (sleeping sickness); leishmaniasis; leprosy (Hansen's disease); lymphatic filariasis; mycetoma; chromoblastomycosis and other deep mycoses;

onchocerciasis (river blindness); rabies; scabies and other ectoparasites; schistosomiasis; soil-transmitted helminthiases; snakebite envenoming; taeniasis/cysticercosis; trachoma; and yaws (endemic treponematoses). Malaria and water-borne diseases such as coliform-caused illness, giardiasis, cholera and norovirus are also included.

#### **Human resistance to antibiotics**

This dataset covers all aspects of human resistance to antibiotics, with the exception of papers related to environmental aspects that were more difficult to identify.

#### **Regenerative medicine**

This dataset covers articles on stem cell research, as well as on regenerative technologies and therapies such as tissue engineering, biomaterials and nanoscaffolds.

#### **Impact on health of soil, freshwater and air pollution**

This dataset contains articles related to the assessment and mitigation of the impact of air, soil and freshwater pollution on the environmental health of humans. Topics covered include pollution monitoring, the assessment and effects of exposure to heavy metals, plastics, particulate matter, radiation and other pollutants.

#### **Medicines and vaccines for tuberculosis**

This dataset includes all articles on tuberculosis, except bovine tuberculosis.

#### **New or re-emerging viruses that can infect humans**

This dataset covers research on human resistance to new or re-emerging viruses that can infect humans. For example, this dataset includes articles on epidemiology, treatment, prevention and transmission vectors of emerging viruses such as Influenza A subtype H1N1, SARS-CoV, Ebola and hantaviruses. This topic excludes articles on HIV, which is treated separately. Also excluded are articles on SARS-CoV-2 (Covid-19), as it had not yet been identified in 2019.

#### **Type 2 diabetes**

This dataset covers research on prevention, effects, treatment and epidemiology of type 2 diabetes, also known as non-insulin-dependent diabetes mellitus or adult-onset diabetes. Efforts were made to include articles which study the impact of socio-economic factors on the development of the disease, such as obesity, malnutrition, lack of education and a sedentary lifestyle. Articles about insulin resistance, prediabetes and maturity onset diabetes of the young were also included. Studies of the genetic factors that play a role in development of the disease were also included. Some articles on other health conditions for which diabetes may be an aggravating condition are included but are not the focus of this dataset. Articles about heart disease were removed, unless they contained diabetes-related terms in their title, as were papers which mentioned diabetes in the abstract when the topic was then found to be peripheral to the dataset. Articles that only addressed type I diabetes or were ambiguous about the type of diabetes studied were excluded.

Articles were included, on the other hand, if the particular type of diabetes was not indicated in the title, keywords or abstract but the publication mentioned risk factors like obesity that are more specific to type 2.

## Topics relating to SDG6: Clean water and sanitation

---

The data are presented in Table F3 of the statistical annex, which is available online, along with the full dataset.

### Sustainable withdrawal and supply of freshwater

This dataset includes all articles pertaining to the sustainable governance, management and policy of withdrawal, supply and use of freshwater. Freshwater sources include groundwater, lakes and rivers.

### Water harvesting

This dataset includes articles on techniques for harvesting precipitation, stormwater, runoff and fog. It also includes articles on rainfed agriculture and irrigation.

### Desalination

This dataset includes articles related to desalination technologies, such as osmosis, membrane distillation, solar distillation and micro- and nanofiltration.

### Wastewater treatment, recycling and re-use

This dataset includes articles on the management and treatment of wastewater, sewage water, polluted water and greywater, as well as re-use and recycling techniques.

### National integrated water resource management

This dataset includes articles pertaining to the management of water resources and their allocation for domestic, agricultural and industrial use. It includes articles on policies and laws pertaining to water use and allocation (e.g. reservoir management), as well as system modelling (e.g. water use, reservoir or water quality) to enable strategic decision-making and the optimization of processes. Articles about management of water distribution networks or the smart water grid are also part of the dataset. Some articles may analyse the situation at local level, since the use of the key word 'national level' served, above all, to exclude articles on transboundary water resource management, as this topic is treated separately.

### Transboundary water resource management

This dataset includes articles on governance, management, co-operation, law, allocation and sharing of transboundary and international freshwater resources, as well as related conflicts and disputes. Water resources analysed encompass aquifers, groundwater, lakes and rivers.

## Topics relating to SDG7: Affordable and clean energy

---

The data are presented in Table F4 of the statistical annex, which is available online, along with the full dataset

### Cleaner fossil fuel technology

This dataset includes articles on clean coal technology, integrated carbon capture and storage technology, carbon dioxide (CO<sub>2</sub>) capture from fossil fuel power plants, desulfurization of flue gases, the clean production of synthetic fuel, refinery processes to limit contaminants emitted, the clean synthesis of methanol and the conversion of CO<sub>2</sub> to hydrocarbons or fuel.

### Photovoltaics

This dataset includes articles relating to stationary hosts, namely, solar cells, solar panels and photovoltaic cells. It also includes larger-scale projects, such as solar farms. Articles about developing materials specifically for solar cells are included.

### Hydropower

This dataset includes articles relating to both large and small hydropower projects. It includes articles on the different types of dams but also on other hydropower methods (e.g. tidal and wave energy) and the development of specific hydropower station parts like hydroturbines.

### Biofuels and biomass

This dataset includes articles on the main biofuels, such as bioethanol, biomethane, biobutanol and biocrude, as well as their production in biorefineries. Articles on the processing of biomass to create biofuels are also included. Little content was found on the hydraulic head of such processes.

### Wind turbine technologies

This dataset includes articles about wind turbines and wind farms, with a focus on both their conception and their use. All main types of wind turbines are included, such as horizontal-axis, vertical-axis, offshore and floating wind turbines. Articles about the main types of generator used in the turbines are also part of this dataset, examples being doubly fed induction and Savonius.

### Nuclear fusion

This dataset includes articles relating to studies of nuclear fusion for energy purposes, as well as articles relating to the development of materials, parts and methods to build nuclear fusion reactors. It voluntarily excludes articles focused on nuclear fusion reactions in stars because those are mostly unrelated to energy production on Earth.

### Geothermal energy

This dataset contains articles on geothermal energy, the generation of electricity from geothermal energy and different techniques for harnessing this energy, most notably, enhanced geothermal systems and hydraulic stimulation. A small number of articles about the safe digging of wells to access this energy is also included.

### **Hydrogen energy**

This dataset contains articles on most aspects of hydrogen energy harnessing. Machines and systems designed to have hydrogen as their source of power, the industrial production and storage of hydrogen and hydrogen-based fuel cells (i.e. most fuel cells) are all included.

### **Smart-grid technology**

This dataset contains articles on smart grid technology and techniques and protocols to enable smarter, more reliable electrical networks. Articles are included on new devices such as smart power meters and grid-friendly appliances, as well as on protocols related to distributed grids and microgrids, such as islanding detection. Articles relating to the cybersecurity of smart grids are also included in the dataset. Furthermore, articles related to new challenges for the grid, such as electric vehicle (EV) charging on a national scale, are included because many of those articles advocate ‘vehicle-to-grid’ energy transfers and real-time pricing when mentioning EV charging. An effort was made to exclude papers specific to EVs that do not address the electrical grid. Some articles about renewable energy sources are part of the dataset but they only concern the integration of these new power sources in the grid.

## **Topics relating to SDG9: Industry, innovation and infrastructure**

---

The data are presented in Table F5 of the statistical annex, which is available online, along with the full dataset

### **Carbon pricing**

This dataset includes articles related to all aspects of the taxation and trading of carbon and other greenhouse gas emissions (also known as cap and trade): the carbon market, carbon allowance, carbon credits, carbon trading, carbon pricing and carbon taxation.

### **Eco-industrial waste management**

This dataset includes articles on the safe treatment and disposal of waste chemicals and other industrial wastes, such as those from the construction, pharmaceutical and electronic industries, reactive waste and wastewater treatment. Articles are also included on the minimization of waste production, such as zero-waste manufacturing and waste-to-energy processes. Articles about remediation techniques for soils contaminated with industrial wastes (heavy metals, petroleum, etc.) are included but these exclude nuclear waste, since it is treated separately.

### **Radioactive waste management**

This dataset contains articles about radioactive waste management, storage and disposal. Articles about methods such as safe geological disposal, transmutation and vitrification of nuclear waste are included.

### **Eco-alternatives to plastics**

This dataset includes articles studying the synthesis, effects and potential applications of ecologically friendly

alternatives to traditional fossil fuel-derived plastics.

Articles on biodegradable plastics or alternatives based on cellulose, starch or banana fibres are included. Any articles containing terms such as ‘sustainable alternative to plastics’ or ‘environmentally degradable plastics’ are also included.

### **Eco-construction materials**

This dataset includes articles relating to ‘eco-building’, ‘green building’, ‘sustainable construction’, ‘ecological housing’, ‘sustainable architecture’ and other permutations of those terms. There is also a focus on low-energy and zero-energy buildings, sustainable building certifications (e.g. Leadership in Energy and Environmental Design [LEED] or Passivhaus) and environmentally friendly materials, sustainable materials and recycled materials. Articles on retrofitting buildings and infrastructure are included. The dataset is primarily focused on passive construction practices and materials, rather than active methods such as photovoltaic panels or wind generator integration, covered in other datasets (see Table F4). Sustainability here is almost always defined from an environmental standpoint but some articles are also focused on economic or social sustainability of buildings or infrastructure. For example, an article might tackle the health implications of using sustainable alternatives to traditional materials or designs for the occupants, or buildings that can better withstand the extreme conditions found in poorer countries or anticipated conditions relating to climate change.

### **Greater battery efficiency**

This dataset contains articles on battery efficiency, new battery technologies and battery design and optimization. Since most articles are written to report improvements on batteries, most rechargeable battery types were included as keywords in the dataset, with the greatest contributions coming from more recent battery types such as Li-ion. Articles concerning the recycling of spent batteries and battery integration in the electrical grid are also part of the dataset.

### **Sustainable transportation**

This database focuses on the development and use of sustainable means of transportation, including electric vehicles, solar vehicles, plug-in hybrid vehicles and hydrogen vehicles. Most articles indexed focus on cars but planes, boats, trains and trucks are all included. The dataset includes articles on self-driving cars and associated technologies, such as autonomous intersection management, lane detection and advanced driver assistance. This is because self-driving cars would achieve better fuel economy (or energy economy, if electric) and have the potential to reduce the number of road accidents. Articles are included on other methods of sustainable transportation and policies, such as carsharing, public bicycles, car-free cities and congestion pricing. ‘Sustainable transport’ is used as a keyword but, with the exception of publications using the terms ‘solar boat’ and ‘electric boat’, shipping is not explicitly included in this dataset.

## Topics relating to SDG13: Climate action

The data are presented in Table F6 of the statistical annex, which is available online, along with the full dataset

### National and urban greenhouse gas emissions

This dataset includes articles on the measurement, assessment and estimation of greenhouse gas emissions at the national and urban levels. It includes articles on national and urban emission sources, such as agricultural, industrial and urban sources, including transportation.

### Carbon capture and storage

This dataset includes articles on carbon capture techniques, such as pre-, post- and oxyfuel combustion, direct air capture and carbon sequestration, which is the capture and storage of carbon through natural (biological, chemical and physical) processes that include photosynthesis, oceanic and geological capture. The publications refer to both natural sequestration and human attempts to enhance sequestration. This dataset is restricted to gaseous carbon; it excludes solid-state carbon, namely particulate matter.

### Local impact of climate-related hazards and disasters

This dataset focuses on articles assessing climate hazards and climate-related disasters and the impact of these on small and vulnerable communities. Examples are coastal erosion, sea level rise, droughts, floods and extreme weather events.

### New technologies to protect from climate-related hazards

This dataset focuses on any technology, innovation or tool that has the potential to mitigate the impact of climate change or climate-related disasters on communities. This includes publications on ways of building more resilient infrastructure, as well as those on better modelling tools to predict the risk of occurrence and consequences of catastrophic events, enabling better preparedness.

### Local disaster risk reduction strategies

This dataset focuses on planning processes and techniques that help to reduce the risk faced by local and vulnerable communities with respect to climate change and related disasters, such as drought, flooding, extreme storms and wildfires. The publications included consider communities' strategies, preparation and mitigation efforts as well as their capacity to recover and be resilient.

### Climate-ready crops

This dataset includes articles related to agriculture and crops that are tolerant of and resilient to salinity, flooding, drought and other climate-related stressors.

## Topics relating to SDG14: Life below water

The data are presented in Table F7 of the statistical annex, which is available online, along with the full dataset

### Coastal eutrophication

This dataset includes all articles on coastal eutrophication, phosphorus removal and pollution, algal blooms, water nutrient dynamics and specific harmful algal species.

### Floating plastic debris in the ocean

This dataset includes articles related to plastic debris and plastic pollution in the ocean. Search terms cover plastic and plastic types in aquatic environments, plastic consumption by marine wildlife, as well as the identification of plastics and byproducts in marine and coastal environments and food chains.

### Ocean acidification

This dataset includes all articles on ocean acidification and seawater acidification, including those assessing the impact on species.

### Sustainably manage marine tourism

This dataset includes articles on tourism management and the effects of tourism on oceanic or coastal zones. Articles often focus on the environmental impact but the socio-economic impact is also covered. Whenever there was a focus on sustainability, cruises, diving, recreational fishing and sea animal tourism (watching, swimming and diving) were all specifically included as search terms.

### Sustainably manage fisheries and aquaculture

This dataset includes articles on fish farming and aquaculture, as well as commercial fishing as it relates to sustainable resource management. The dataset was constructed using key terms related to sustainable fisheries and aquaculture, as well as species and techniques commonly associated with these practices. When aquatic species names were used, this was done in conjunction with terms related to sustainability, to limit the dataset to the topic as much as possible.

### Ecosystem-based approaches in marine environments

This dataset contains articles relating to management of coastal zones using an ecosystem-based approach, meaning the ecosystem and its interactions are considered as a whole in management processes. The dataset includes articles on concepts like integrated coastal zone management, which is closely linked to ecosystem-based approaches. When the dataset was verified, no articles focusing on ecosystems in international waters were found.

## Topics relating to SDG15: Life on land

---

The data are presented in Table F8 of the statistical annex, which is available online, along with the full dataset

### **Sustainable use of terrestrial ecosystems**

This broad dataset includes all papers on the conservation, preservation, restoration and sustainable use of terrestrial ecosystems: forest, habitat, land, wildlife, pond, freshwater, drylands, etc. It includes research on species richness, biodiversity, etc. It also includes articles on ecosystem services.

### **Status of terrestrial biodiversity**

This dataset includes articles on species with a defined conservation status, as well as more fundamental research needed to monitor, predict and protect those species. For example, articles on causes of species endangerment, such as habitat loss, are included.

### **Minimize poaching and trafficking of protected species**

This dataset includes articles on the Convention on the International Trade of Endangered Species (CITES), wildlife trade, poaching, illegal fishing, illegal harvesting, wildlife forensics, etc.

### **Tackle invasive alien species**

This dataset includes all articles related to biological invasions, alien species, invasive plants, etc. Basic research on invasive potential has also been included.

### **Use of ecosystem-based approaches in protected areas on land**

This dataset includes articles on ecosystem-based management of public and private land. An effort was made to exclude marine and freshwater ecosystems, to avoid overlap with other selected topics.

### **Extent of water-related ecosystems**

This dataset includes articles measuring the extent of water-related ecosystems (excluding oceans) such as wetlands, rivers, estuaries, lakes, aquifers, swamps, fens, peatlands, marshes, mangroves and artificial water bodies. It involves articles either measuring or improving delineation protocols of such systems, as well as estimating the water quantity

involved. Articles on disappearing systems are included, as well as articles on the inventory of water-based ecosystems. Some articles on ecosystems related to either the water quality or quantity found in ecosystems such as forests and mountains are also included when these are directly related to water.

### **Socio-ecological impact of terrestrial protected areas**

This dataset covers conservation planning, reserve selection and reserve design, as well as the prioritization of protected areas and the future habitat suitability under climate change. The negative and positive impact of protected areas on humans, such as human–wildlife conflict or valuation of ecosystem services, are also targeted.

# Statistical annex

**Table A1:** Socio-economic indicators, various years

**Table B1:** Research expenditure as a share of GDP and in purchasing power parity dollars (PPP\$), 2015 and 2018

**Table B2:** Research expenditure by sector of performance and source of funds, 2015 and 2018 (%)

**Table B3:** Public expenditure on higher education, 2015 and 2018

**Table C1:** Tertiary graduates in 2015 and 2018 and STEM graduates by field in 2018

**Table C2:** Total researchers and researchers per million inhabitants, 2015 and 2018

**Table C3:** Researchers by field of science, 2018 (%)

**Table D1:** Scientific publications by region and country, 2011–2019

**Table D2:** Publications by broad field of science, 2014–2016 and 2017–2019

**Table D3:** Scientific publications resulting from international collaboration, 2014–2016 and 2017–2019

**Table D4:** Scientific publications on cross-cutting strategic technologies, 2015 and 2019

**Table E1:** Number of patents granted by the top 5 patent offices (IP5), 2015–2019

**Table F1:** Volume of publications on selected research topics relating to SDG2: zero hunger, 2012–2015 and 2016–2019

**Table F2:** Volume of publications on selected research topics relating to SDG3: good health and well-being, 2012–2015 and 2016–2019

**Table F3:** Volume of publications on selected research topics relating to SDG6: clean water and sanitation, 2012–2015 and 2016–2019.

**Table F4:** Volume of publications on selected research topics relating to SDG7: affordable and clean energy, 2012–2015 and 2016–2019

**Table F5:** Volume of publications on selected research topics relating to SDG9: industry, innovation and infrastructure, 2012–2015 and 2016–2019

**Table F6:** Volume of publications on selected research topics relating to SDG13: climate action, 2012–2015 and 2016–2019.

**Table F7:** Volume of publications on selected research topics relating to SDG14: life below water, 2012–2015 and 2016–2019

**Table F8:** Volume of publications on selected research topics relating to SDG15: life on land, 2012–2015 and 2016–2019

**Table A1:** Socio-economic indicators, various years

**KEY** -: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | a: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Within each field of study, the share of tertiary graduates refers to the share of all tertiary graduates in all fields accounted for by both sexes in that field of study. The share of females refers to the female share of total graduates within that field.

**KEY** -: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | a: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: The year for the share of female researchers may not be the same as the year for total researchers for some countries.

Source: UNESCO Institute for Statistics, August 2020; for population, World Bank's World Development Indicators

Researchers in head counts						<i>HC: head counts FTE: full-time equivalents</i>
Total researchers	Female researchers (%)*	Researchers per million inhabitants	Total researchers	Female researchers (%)*	Researchers per million inhabitants

Note: Publication counts are based on the full-counting method. A publication is counted as internationally co-authored if at least two defined countries are present in the address field (i.e., excluding unassigned addresses). The share of publications with foreign co-authors is the ratio of the count of international co-authored publications and the total number of publications. Publication co-authorship could not be detected among regions or income groups. The numbers of co-authored publications are displayed in brackets. Because of ties, some positions are not occupied and cells are thus left empty. Publications from the following are presented separately but cannot be listed as collaborators of one another: China; China, Hong Kong SAR; China, Macao SAR; and China, Taiwan Province.

**Table D4:** Scientific publications on cross-cutting strategic technologies, 2012–2019

The growth rate is calculated as the number of publications from 2016–2019 divided by the number of publications from 2012–2015.	Total			Artificial intelligence & robotics			Bioinformatics			Biotechnology			Blockchain	
	2012–2015	2016–2019	Growth rate	2012–2015	2016–2019	Growth rate	2012–2015	2016–2019	Growth rate	2012–2015	2016–2019	Growth rate	2018	2019

**Table D4:** Scientific publications on cross-cutting strategic technologies, 2012–2019

The growth rate is calculated as the number of publications from 2016–2019 divided by the number of publications from 2012–2015.	Total			Artificial intelligence & robotics			Bioinformatics			Biotechnology			Blockchain	
	2012–2015	2016–2019	Growth rate	2012–2015	2016–2019	Growth rate	2012–2015	2016–2019	Growth rate	2012–2015	2016–2019	Growth rate	2018	2019

**Table D4:** Scientific publications on cross-cutting strategic technologies, 2012–2019

The growth rate is calculated as the number of publications from 2016–2019 divided by the number of publications from 2012–2015.

**KEY** –: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | a: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: The sum of the numbers for the various regions exceeds the total number because papers with multiple authors from different regions are counted for each of these regions. No Scopus-indexed journal specialized in blockchain technology published papers prior to 2018. As such, counts prior to 2018 are all 0. However, it is important to consider that these counts ignore blockchain technology publications that may have been published in more general ICT journals.

**KEY** –: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | a: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Patent counts are based on the full-counting method, according to the countries of inventors and years in which the patents were granted by the five patent offices, namely the US Patent and Trademark Office (USPTO), European Patent Office (EPO), Japanese Patent Office (JPO), Korean Intellectual Property Office (KIPO) and State Intellectual Property Office of the People's Republic of China (CNIPA). Therefore, the sum across countries/regions is higher than the world total because of co-inventorship. The IP5 total is the sum across all five offices; therefore, some inventions are counted more than once because patents to protect them may have been granted in more than one market. Data quality is high for the USPTO and EPO, but information related to the country affiliation of inventors is often missing in PATSTAT for CNIPA, JPO and KIPO. To avoid underestimating output levels for countries with intensive patenting activity at these offices, methods based on patent families were implemented to reduce the number of unknown affiliations to a minimum (i.e., only a few percentage points). Caution is nonetheless advised because these methods do not make it possible to correct the data perfectly.

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** -: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The following are excluded from the present table because they did not publish on these topics over the period under study: Cook Islands, Equatorial Guinea, Liechtenstein, Nauru, St Lucia, St Vincent and the Grenadines, Turkmenistan and Tuvalu. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

\*All diseases in the list of the neglected tropical diseases from the World Health Organization were included: Buruli ulcer, Chagas disease, Dengue and Chikungunya, Dracunculiasis (guinea-worm disease), Echinococcosis, Foodborne trematodiases, Human African trypanosomiasis (sleeping sickness), Leishmaniasis, Leprosy (Hansen's disease), Lymphatic filariasis, Mycetoma, chromoblastomycosis and other deep mycoses, Onchocerciasis (river blindness), Rabies, Scabies and other ectoparasites, Schistosomiasis, Soil-transmitted helminthiases, Snakebite envenoming, Taeniasis/Cysticercosis, Trachoma and Yaws (Endemic treponematoses). Malaria and water-borne diseases, such as coliform, giardia, cholera and norovirus, were also included.

SI2011–2019: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** -: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

Source: Prepared by Science-Metrix using Scopus data (Elsevier), including those for social sciences, arts and humanities

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** -: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The following are excluded from the present table because they did not publish on these topics over the period under study: Antigua and Barbuda, Belize, Cook Islands, Comoros, Dominica, Equatorial Guinea, Grenada, Guinea-Bissau, Guyana, Kiribati, Liberia, Maldives, Marshall Islands, Nauru, Niue, Samoa, Sao Tome and Principe, Seychelles, Somalia, St Kitts and Nevis, St Lucia, St Vincent and the Grenadines, Suriname, Tonga and Tuvalu. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** –: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The following are excluded from the present table because they did not publish on these topics over the period under study: Antigua and Barbuda, Comoros, Equatorial Guinea, Gabon, Grenada, Guinea-Bissau, Kiribati, Marshall Islands, Nauru, Niue, Palau, Sao Tome and Principe, St Kitts and Nevis and Tuvalu. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

\*Eco-industrial waste management excludes nuclear waste

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** –: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The following are excluded from the present table because they did not publish on these topics over the period under study: Antigua and Barbuda, Bahamas, Chad, Cook Islands, Dominica, Eritrea, Guinea-Bissau, Kiribati, Liberia, Marshall Islands, Nauru, Niue, Palau, Sao Tome and Principe, Seychelles, Somalia, St Kitts and Nevis, St Vincent and the Grenadines, Tonga, Tuvalu and Vanuatu. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** –: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The following are excluded from the present table because they did not publish on these topics over the period under study: Angola, Antigua and Barbuda, Belize, Cook Islands, Djibouti, Equatorial Guinea, Eswatini, Grenada, Guinea-Bissau, Liberia, Liechtenstein, Mauritania, Nauru, Sao Tome and Principe, St Kitts and Nevis, St Lucia, St Vincent and the Grenadines, Suriname and Turkmenistan. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

Source: Prepared by Science-Metrix using Scopus data (Elsevier), including those for social sciences, arts and humanities

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** -: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. The following are excluded from the present table because they did not publish on these topics over the period under study: Afghanistan, Antigua and Barbuda, Bhutan, Central African Republic, Chad, Djibouti, Equatorial Guinea, Eswatini, Gambia, Guyana, Lesotho, Liechtenstein, Nauru, Niue, Palestine, South Sudan, St Vincent and the Grenadines and Turkmenistan. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.

SI<sub>2011–19</sub>: The specialization index is measured as the proportion of output of a given country on a given topic, divided by the proportion observed at the global level. For example, a country with 2% of its output being on a research topic that represents 1% of all research worldwide would score 2.00, having twice as much output as expected, relative to the global average.

na = the total number of publications is too low to calculate the specialization index

**KEY** –: data unavailable | -n/+n: data refer to n years before or after reference year | 0: magnitude nil or negligible | na: not applicable

GDP: gross domestic product | MF: males and females | PPP\$: purchasing power parity dollars

Note: Publication counts of articles, reviews and conference papers are based on the full-counting method. Therefore, the sum across countries is higher than the global total because of co-authorship. The selected topics in the present table are examples of research topics furthering the SDG agenda. These topics are not necessarily mutually exclusive. Nauru was excluded from this table because no Nauruan researchers published on these topics in the period under study. The total for the People's Republic of China excludes its Special Administrative Regions of Hong Kong and Macao and the Taiwan Province of China.
